An estimated 75% of a child's time in a classroom is spent engaged in listening activities. When a student can not focus on the spoken word of the teacher, students not only lose their desire to learn but also the ability. Poor acoustics can interfere with the students development of spoken language, reading and writing skills and academic performance. The Hamilton Audio Enhancement System is the solution. This system allows an educator to place wireless speakers with integrated receivers around the classroom to put their voice where it's needed when their own volume isn't enough.

System Includes: (1) Wireless lapel microphone and transmitter (2) Wireless speakers (1) Frequency tuned receiver (1) Frequency tuned transmitter
